

Alpego Jet-X Pneumatic Seed Drill

£POA

Jet-X pneumatic seed-drill is robustly built for challenging conditions. The centre of gravity is positioned forward to offer greater stability. All the functions and controls are designed to be user-friendly. The easily detachable linkage system releases the seed-drill from the power harrow while the sowing management is completely electric so that all calibrations can be done directly from the tractor's cabin by using the ISOBUS system. Precision sowing also benefits from the Alpego Dorsal metering unit. Contact us for pricing and financing options.
