

MX V500 Manubal Bale Grab

£POA

OPTIMISED GEOMETRY FOR ALL BALE TYPES

The MANUBAL V series handles round and rectangular bales equally effectively. The double linkage allows for: • either wide closing (for round bales of Ø0.90 to Ø1.80 m) • or wide opening (for rectangular bales). The ends of the tines are kept clear of the mast, the bale is therefore protected, allowing direct contact between the MANUBAL and the bale and giving the tines a better grip.
